Survival Optimization – Improving Your Odds

- **When is it time to add to or change members of my medical team?**
- **How do I select the right tools for my case and select physicians who use these tools like craftsman?**
- **How do I choose among the many treatments available today?**
- **What do I need to know in order to improve the likelihood of achieving a durable remission?**
- **Do I need to read research papers to gain better insight into my conversations with my medical team?**
- **Exactly how does prostate cancer grow and why do I need to know some basics of cellular biology ?**

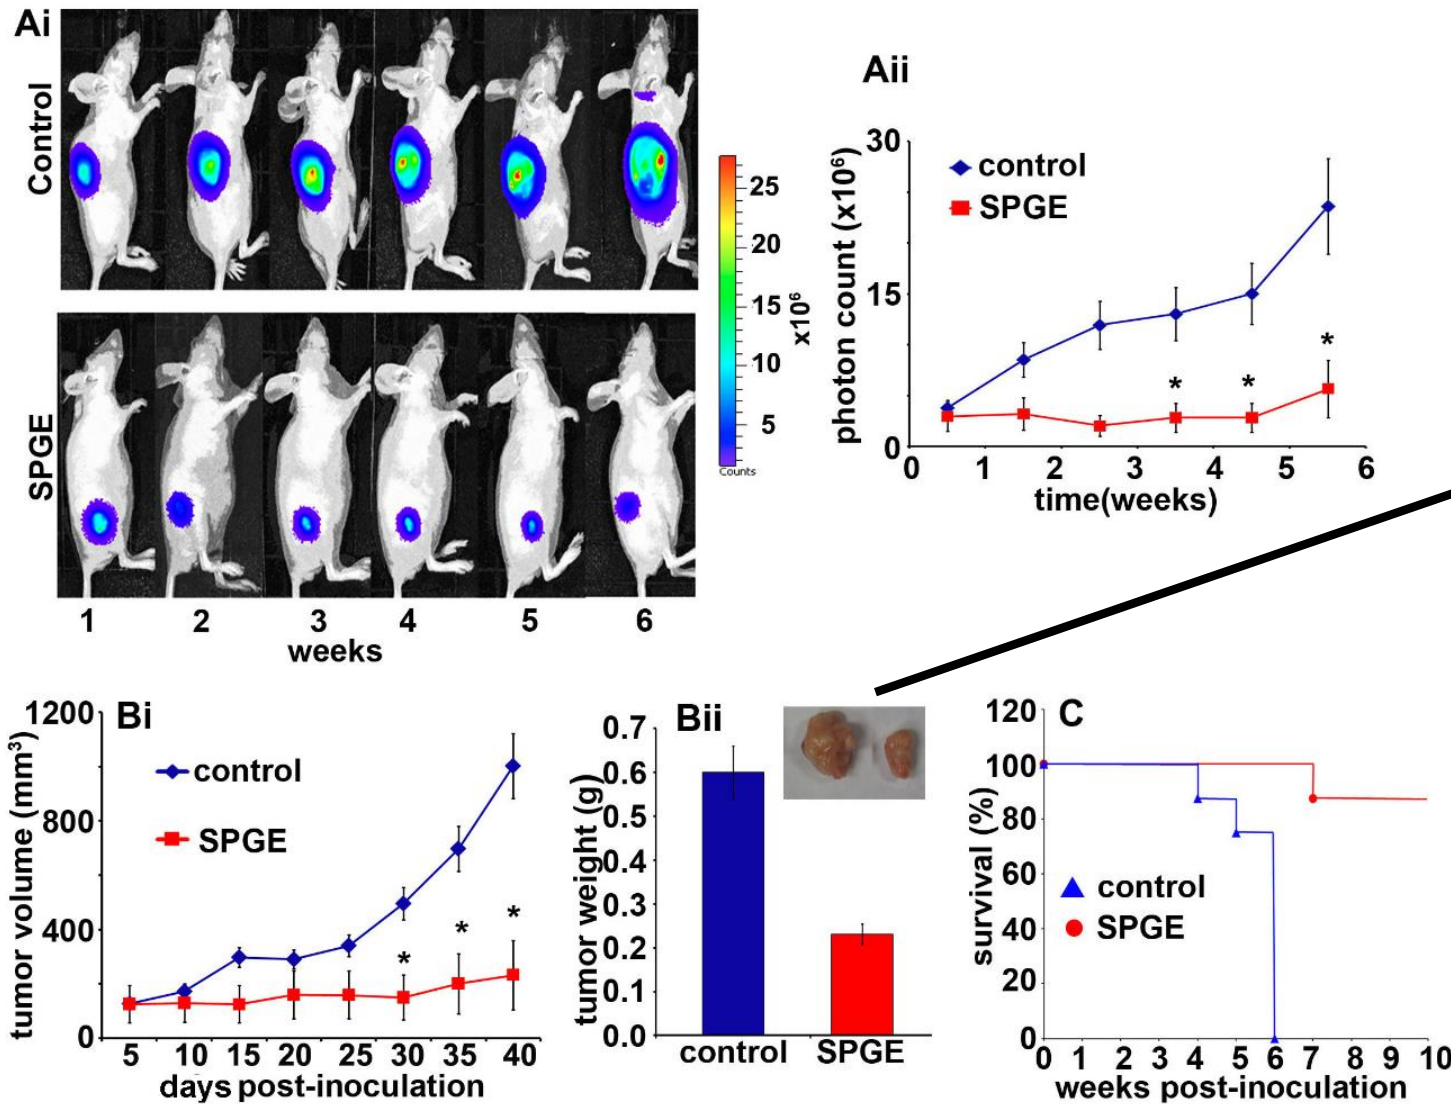

PROSTATE CANCER TOPICS 10-14-2019

Some Basic Cellular Biology

- What is the Prostate Gland and what are prostate glands?

Two-thirds of the prostate is glandular while the remaining third is fibromuscular.

Prostatic secretions help prevent infection in the urethra, energize sperm and keep the urethral lining moist.

Honorio et al., Figure 1 - Cartoon showing the general structure of a human prostatic gland.

Figure 2. Schematic depicting the tumorigenic hierarchy of tumor cells in xenograft tumors.

From Patrawala, et al. *Cancer Res* 67:6797, 2007
(Cell colors have been reassigned to match those in Figure 1.)

Appendix

SO WHICH IS IT ?

Objective Fact	Theory and/or Hypothesis	Opinion
305 distinct cells and countable on a slide looking at 100x	Chemical Z @ 30 mg/kg of body weight should slow PCa growth rate	Patients should be treated with chemical Z (medical opinion)
The patient missed their morning dose of drug Z	Missing one dose should not matter due to fat storage of chemical Z	Do not double the next dose for safety (medical opinion)
PSADT was 4.2 months using exponential curve fitting over last 12 months of PSA test data	After missing one dose, it is critical to double the next dose of chemical Z	Double the next dose to maintain treatment (medical opinion)
PSA was undetectable @ < 0.01 ng/ml for the tenth month in a row	Z taken with Y can increase response by 4 x vs. Z alone	30 mg/kg is a safe and effective dose for Z (FDA opinion)
